

Miter Strips. . . Provide a *Smooth Transition* at the gutter corners along with a *Smooth* and very appealing end appearance.

Miter Strips are installed at all corners / junctions.

The detail or installation is the same for both inside and outside corners (miters).

Miter Strips

- * Approx. 8 inches in length
 - * Tapered on one end to match gutter edge.
 - * "H" shape allows for guard insert on both sides.
 - * Allows for 1/2" variance in the angle or cutting of the guard for installation time savings.
-
- * Trim Miter Strip to length at the roof line and should disappear under the roofing for a nice - clean finished installation.

End Caps . . . Close the system off to prevent birds, bees, animals, etc... from entering the gutter system and nesting.

End Caps are 2.5"x 6" flat aluminum stock. Painted Enamel (Black)

Each end cap will need to be individually fabricated on site because each gutter position is different than the last.

Skill & craftsmanship is needed to fabricate a snug fitting end cap.
