

## INSIDE CORNERS

Just butt the panels together as shown below and insert a piece of screen in the opening. You can cut the panels on an angle and cover the whole inside corner but water will shoot over until debris collects in the roof valley.

## TESTING THE PRODUCT

Use a sprayer on a garden hose and wet the panel and the roof just above at the same time. Start out with a light spray and then increase it to simulate rain.

## UNLOCKING THE CLIP

Insert screwdriver here and pry up.
