

# Filtrate Gutter Guard Installation Guide

## STEP 1

Clean: Wipe off top of gutter so it is very clean.

## STEP 2

Straight Sections:

Pull off 2 inches of the red tape backing.

Slide the gutter guard into place. The back edge should be inserted between the shingle and the roofing paper.

Pull red tape backing all the way off.

Gently push down front edge so tape sticks firmly.

**STEP 3**

**Cutting sections**

Cut the front aluminum.

Cut the through the back and mesh.

Hold front and snap front piece in two.

**STEP 4**

**End of gutter**

Cut the front aluminum.

Grab front with snips and snap off.

Pull off with fingers.

**STEP 5**

Inside corner of gutter

Cut aluminum so mesh hangs out.

Pull red tape cover 2 inches.

**STEP 6**

**Outside corner of gutter**

Push aluminum strip down in gutter.

Cut off corner.

**Gutter Guard Brushing**

If debris ever becomes a problem where rainwater runs off the front of the gutter, you can use a brush on the end of an extension pole to brush it off.

**Removing the Gutter Guard**

Use a sharp knife and cut tape between the gutter guard and gutter. You can apply another piece of adhesive tape to fasten it back on gutter, or you can just screw the gutter guard back down with self-tapping screws.
