

QuickScore™ Patent No. 6,755,067

One of the more innovative tools to come along in years! You can now process all your scorable materials faster, easier and get a factory-edge every time. Be sure you get the right score, a QuickScore™.

Consider the advantages. QuickScore™ scores along the outer edge of the brake allowing a natural downward separation along the score line while the material snaps off into your hands, right where you need it. That means faster, cleaner edges with less effort.

QuickScore™ scores along the outer edge of the brake allowing a downward separation of the material at the score line.

1. Score Entire Length

Lock material in brake at desired width + 3/4". Extend QuickScore™ along entire length of material.

2. Press Downward

Extend material downward along score. Use uniform pressure to avoid kinks.

3. Lift Material

Extend material back to level position. Piece separates right into hands.

4. Automatic

After separation, material is automatically set for standard 3/4" bend, or true 180 degree hem.
